

# Delivering **at scale** on Salesforce

Salesforce is a strategic platform, driving growth and efficiency for your enterprise. But its potential can be double-edged: development teams often struggle to keep pace with demand from the business while maintaining increasingly complex Salesforce organizations.

This challenge has driven widespread adoption of Salesforce DevOps — the best practices that accelerate delivery while improving quality and security. According to the State of Salesforce DevOps report, **96% of enterprises are adopting Salesforce DevOps**.

## DevOps done right

Gearset has worked closely with thousands of enterprises to understand the challenges faced by large, distributed teams. We've built powerful solutions to enable DevOps at any scale on Salesforce.

### **Accelerate delivery while improving quality and security**

Build a highly automated pipeline for continuous delivery, while catching security and quality issues early with automated testing and code reviews.

### **Standardize processes across teams and ensuring good governance**

Configure your setup within guardrails, guided by DevOps experts.

### **Manage multiple large teams with different release cadences**

Long-term projects can be developed outside of BAU, but with easy back syncing from the main release pipeline. Layered modules let you manage your core Salesforce setup consistently across your orgs, while allowing customizations for different regions or departments.

### **Get success with Agentforce and building an agentic enterprise**

Full support for Agentforce allows teams to test, deploy and iterate on agents.

***The biggest impact of Gearset is the scalability.***

*Gearset's Pipelines solution has really helped the company get to the operating level we're at today.*

## Gearset's impact

Data from this year's State of Salesforce DevOps survey shows that most Gearset customers:

Deploy in under one hour

Recover within hours of data loss

Release at least once a week

95% of customers report ROI

Catch bugs before release more than 90% of the time

An average support response time of 2 minutes

Lead time at the moment is a little over a day, and we're now **deploying 16 times a month**. Without Gearset, we wouldn't have been able to **keep up with the demand from the business** to grow and be reactive.
